With 2 high volatility days, and a New Moon (they often see volatile moves), we should have seen some large moves for stocks on Tuesday and/or Wednesday.

All indicators have a +/- 1-day window in which their energy should be seen.  
 \* Static is an atmospheric condition when human mental processing is more difficult.

There were two indicators that reached a Bearish level 3. The Moon in the Bearish Sign of Scorpio. The lowest Bullish/Bearish count for the week (-4). Jupiter entering Sagittarius (Very Bullish). Couldn't say which way it would go, but if Wednesday closed higher, Thursday would close lower.

All indicators have a +/- 1-day window in which their energy should be seen.

\* Static is an atmospheric condition when human mental processing is more difficult.

Friday had mixed indicators. Most likely it would go down due to the Bullish energy of Jupiter moving into Sagittarius now turning Bearish. Friday would have been a hard one to call.

All indicators have a +/- 1-day window in which their energy should be seen.  
 \* Static is an atmospheric condition when human mental processing is more difficult.
